Subject Index

A

Abscisic acid
  content in spinach in relation to photoperiod and water stress, 86
  effects on resting potato buds, 31
  ethylene production by cell cultures, 399
  in leaves, osmotic root stress, 752
  water permeability of plant cells, 103
Abscission
  effect of freezing temperatures on in citrus, 724
  role of ethylene modification of auxin transport, 208
Acer pseudoplatanus, D-glucose 6-phosphate cycloaldolase from, 255
Adenosine diphosphoglucose-starch glucosyltransferase from developing waxy maize kernels, 765
Aeration rate, tomato respiration and ripening, 53
Aging, membrane transformations in potato tubers, 795
Agrostemma githago, enhancement of nitrate reductase activity by benzyladenine, 702
Air pollution, ethylene, 504
Albizzia julibrissin, phytochrome-controlled nyctinasty, 740
Alga, hydrogen evolution, 108
Amino acids
  composition of host-specific toxin of *Helminthosporium carbonum*, 756
  influence of cycloheximide on synthesis and utilization in suspension cultures, 261
9-Aminoacridine, induction of phenylalanine ammonia-lyase and phaseollin, 197
δ-Aminolevulinic acid biosynthesis and metabolism in *Chlorella*, 316
Amylase
  in developing barley seeds, 331
  synthesis at low water potentials, 541
Anion absorption by plants, 509
Anthocyanin
  contributions of photosynthesis and phytochrome to formation of in turnip seedlings, 312
  ethylene control of synthesis in sorghum, 349
Antimycin A, photosynthesis of spinach chloroplasts, 443
Arabinosides, hydroxyproline, 454
Arachain, purification and properties, 278
Ash, white, IAA transport in shoots, 146
Auxin
  bean hypocotyl hook opening, 187
  DNA/RNA hybridization, 663
  effects of cytokinins on, in coleoptiles of derooted oat seedlings, 97
  elongation in lupin hypocotyls and growth-limiting proteins, 720
  ethylene modification of transport, 208
  ethylene production by cell cultures, 399
  lateral transport by gravity, 642
  regulation of levels in *Coleus* by ethylene, 402

B

Barley
  amylases in developing seeds, 331
  effect of red and far red light on desaturation of fatty acids in leaves, 300
  glucose metabolism of embryos and endosperms from deteriorating seeds, 270
  hydrolytic enzyme production in germinating seeds, 137
  lipid biosynthesis by chloroplasts in relation to plastid development, 526
  protochlorophyll conversion in seedlings, 60
  regulation of nitrate reductase in roots, 219
Bean
  auxin and red light in control of hypocotyl hook opening, 187
  carbohydrate changes in wilted leaves, 792
  castor, microbody development in endosperm during germination, 566
  effect of metabolic inhibitors and temperature on uptake and translocation of ^{45}Ca and ^{42}K, 426
  effects of ethylene on glucanase content of leaves, 504
  IAA biosynthesis in shoots, 603
  light effects on hypocotyl growth, 183
  mung, respiratory chain of mitochondria, 694
  photophosphorylation and photosynthesis in greening leaves, 621
  Pinto, cytokinins extracted from fruit, 320
  protochlorophyllides, 383
  rust-infected, water relations, 69
Benzyladenine, enhancement of nitrate reductase activity in *Agrostemma githago*, 702
Bud, regulation of rest in potato tubers, 31

C

Cabbage
  isolation of spherosomes, 675
  skunk, oxidation-reduction potentials of mitochondria flavoproteins, 493
Calcium, effect of metabolic inhibitors and temperature on uptake and translocation by bean plants, 426
Carbohydrates
  inhibition of *Lemna* flowering, 361
  in wilted leaves, 792
Carbon cycle intermediates, photosynthetic, involvement in CO_2 fixation and O_2 evolution by chloroplasts, 707
Carbon dioxide
  compensation points and photosynthesis, 607
  entrainment of *Lemna* output of through phytochrome, 770
Carbon metabolism in spinach chloroplasts, 379
Carbon monoxide measurement in plants, 376
Carbowax 6000, suppression of cucumber hypocotyl elongation, 513
β-Carotene, necessity for in 518 nm absorbance change, 553
Carrageenan, incorporation of ^{35}S-sulfate into, in *Chondrus crispus*, 373
Carrot, salt, protein loss, and uptake capacity, 287
Cell growth curves, 245
Chilling injury in young cotton plants, 166
Chlamydomonas reinhardtii, glycolate-dichlorophenolindophenol oxidoreductase, 267
Chlorella
  biosynthesis and metabolism of δ-aminolevulinic acid, 316
  photosynthetic unit measured by repetitive short flashes, 282
  regulation of nitrate reductase, 224
  role of molybdenum in nitrate reduction, 294
Chlorophyll in developing cottonwood leaves, 143
Chlorophyllide, photoconversion of protochlorophyllide to, in barley seedlings, 60
Chloroplast
  barley, lipid biosynthesis, 526
  interactions of lipoidal materials and a pyridazinone inhibitor, 171
  phosphoglycerate as Hill oxidant, 163
  spinach
    carbon metabolism, 379
    effect of antimycin A on photosynthesis, 443
    glycolate formation by reconstituted preparation, 325
    inhibition of glycolipid biosynthesis by ozone and sulfhydryl reagents, 335
    photosynthesis and osmotic potentials, 591
    photosynthetic carbon cycle intermediates, 707
Chondrus crispus, incorporation of ^{35}S-sulfate into carrageenan, 373
Chromatin, soybean, DNA synthesis, 43
Citrus, effect of freezing temperatures on ethylene evolution and leaf abscission, 724
Climacteric in ripening tomato fruit, 235
Cold, ethylene evolution and leaf abscission in citrus, 724
Coleoptile
  oat, IAA biosynthesis, 603
  rice, phytochrome effect on ethylene production, 241
  wheat, lignia formation in cell walls, 596
Coleus, regulation of auxin levels by ethylene, 402
Convolvulus, DNA synthesis in root cap cells, 213
Corn
  adenosine diphosphoglucose-starch glucosyltransferases from developing kernels, 765
  autolytically solubilized cell wall glucan, 389
  effects of decenylsuccinic acid on mitochondria, 659

effects of drought on respiration of mitochondria, 413
electrophoresis of RNase isoenzymes, 64
leaf growth and water status, 631
L-phenylalanine ammonia-lyase, 130
polyribosomes and nitrate reductase, 617
transport of ions into root xylem, 111, 118
s-triazines and leaf metabolism, 517
water stress and mitochondrial membranes, 229
water stress and recovery, 613
Corolla, changes in isoenzyme pattern after pollination in *Phalaenopsis*, 506
Cotton
chilling injury and nucleotide changes in young plants, 166
soil water stress, 783
volatile substances emitted by, 50
Cottonseed, isolation of spherosomes, 675
Cottonwood, photosynthesis in developing leaves, 143
Cotyledon
cucumber, microbodies in, 461
developing, of *Vicia faba*, legumin synthesis in, 419
pea
mitochondria development during germination, 671
pyrimidine-metabolizing enzymes, 626
Crown gall, bacteria-specific proteins in tumor tissue, 125
Cucumber
Carbowax 6000 *vs.* mannitol as suppressants of hypocotyl elongation, 513
microbodies in cotyledons, 461
Cycloheximide, synthesis and utilization of amino acids in suspension cultures, 261
Cytokinin
effects on growth and auxin in coleoptiles of derooted oat seedlings, 97
from Pinto bean fruit, 320
in leaves, osmotic root stress, 752
lack of activity in quinolinol sulfate, 645

D

Decenylsuccinic acid, effects on corn mitochondria, 759
Dehydration, tobacco leaf, 575
Deoxyribonucleic acid
synthesis by soybean chromatin, 43
synthesis in *Convolvulus* root cap cells, 213
2,4-Dichlorophenoxyacetic acid, enhanced DNA polymerase activity of chromatin from soybean hypocotyls treated with, 43
Diethyl pyrocarbonate, effects on plant polyribosomes, 801
Dinitrophenol, sensitivity of respiration to, 779
Drought, corn mitochondria respiration, 413
Dwarfism, peach, 91

E

Electron transport in peanut embryos, 340
Embryo
from deteriorating barley and wheat seeds, glucose metabolism, 270
peanut, electron transport in, 340
Endosperm from deteriorating barley and wheat seeds, glucose metabolism, 270
Enzymes
graphical determination of relative concentrations of endogenous inhibitor and, 371
induction in excised plant tissues, 94
Ethylene
abscission, 208
control of anthocyanin synthesis in sorghum, 349
effect of freezing temperatures on evolution in citrus, 724
effect on pea microfibrils, 648
glucanase content of bean leaves, 504
growth and respiratory response of fig fruits, 249
inhibition of production of by rhizobitoxine, 1
phytochrome effect on production of in rice coleoptiles, 241
production by cell cultures, 394, 399
production in excised plant tissues, 94
regulation of auxin levels in *Coleus*, 402
synergism with GA in seeds, 656
synthesis of ribosomes, RNA, and protein in figs, 806
Ethylenediaminetetraacetate, ferric, synthesis, 228
Euglena gracilis, zinc and ribosomes, 150

F

Fatty acids, effect of red and far red light on desaturation in barley leaves, 300
Fern
gibberellin-induced fertility, 416
phytochrome control of spore germination, 100
protein synthesis in irradiated gametophytes, 82
Fertility, gibberellin-induced, in fern, 416
Fig
ethylene and synthesis of ribosomes, RNA, and protein, 806
growth and respiratory response to ethylene, 249
Flavoproteins of skunk cabbage mitochondria, oxidation-reduction potentials, 493
Flowering, *Lemna*
carbohydrate inhibition, 361
water-sensitive phase, 760
Freezing
effect on thylakoid membranes in presence of organic acids, 156
nyctinastic leaves, 203

G

D-Galactose, growth inhibition, 36
Germination
microbody development, 566
mitochondria development, in pea cotyledons, 761
nucleic acid metabolism, 73
of fern spores, phytochrome control, 100
Gibberellin
antagonism by pyrimidine, 537
effects on resting potato buds, 31
fern fertility, 416
Pharbitis nil, incorporation of ^{14}C-kaurene, 476
synergism with ethylene in seeds, 656
Glasshouse pot experiments with rotating *vs.* stationary benches, 789
Glucan, cell wall, autolytically solubilized, 389
D-Glucosamine, growth inhibition, 36
Glucose
metabolism of embryos and endosperms from deteriorating barley and wheat seeds, 270
uptake in carrot root, 287
D-Glucose 6-phosphate cycloaldolase from *Acer* cell cultures, 255
Glycolate-dichlorophenolindophenol oxidoreductase in *Chlamydomonas reinhardtii*, 267
Glycolate formation by reconstituted spinach chloroplast preparation, 325
Glycolipid, inhibition of biosynthesis in chloroplasts by ozone and sulfhydryl reagents, 335
Glyoxysomes, cucumber cotyledons, 461
Gravity, lateral transport of auxin, 642
Growth
effects of cytokinins on, in coleoptiles of derooted oat seedlings, 97
ethylene production by cell cultures, 394
inhibition by D-glucosamine and D-galactose, 36
nutrient uptake by soybean, 457
of corn leaves, water status, 631
response of fig fruit to ethylene, 249
Growth curves, cell, 245
Growth regulators in normal and dwarf peach, 91

H

Helminthosporium carbonum, amino acid composition of host-specific toxin, 756
Hill oxidant, phosphoglycerate as, 163
Hill reaction activity in developing cottonwood leaves, 143
Hybridization, DNA/RNA, auxin, 663
Hydrogen, amperometric measurement in alga, 108
Hydroxyproline, arabinosides in plants, 454
Hypocotyl
bean
auxin and red light in control of hook opening, 187
light effects, 183
cucumber, Carbowax 6000 *vs.* mannitol as suppressants of elongation, 513
lupin, growth-limiting proteins and auxin-induced elongation, 720

I

Illumination
bean hypocotyl growth, 183
bean hypocotyl hook opening, 187
tobacco leaf respiration, 178
Indoleacetic acid
biosynthesis in oat coleoptiles and bean shoots, 603
promotion of IAA oxidase isoenzymes by, 56
transport in white ash shoots, 146
Indole glucosinolates, woad, 498
Invertase, potato tuber, 366
Ion transport into corn root xylem, 111, 118
Isoenzymes, corolla, changes in pattern of after pollination in *Phalaenopsis*, 506
N^6-(Δ^2-Isopentenyl)adenosine, conversion to adenosine by enzyme activity in tobacco tissue, 775
Isoperoxidases, tobacco, effect of scopoletin, 232

K

Kaurene-^{14}C incorporation into gibberellin of *Pharbitis nil*, 476
Kinetin, ethylene production by cell cultures, 399

L

Leaf
ABA and cytokinin contents during osmotic root stress, 752
age of, and photorespiration, 193
barley, effect of red and far red light on desaturation of fatty acids, 300
bean
effect of wilting on carbohydrates, 792
effects of ethylene on glucanase content, 504
photophosphorylation and photosynthesis, 621
CO_2 compensation points and photosynthesis, 607
corn, growth and water status, 631
developing cottonwood, photosynthesis, 143
energy source for nitrate reduction, 580
metabolism of separated cells, 9, 14
nyctinastic, energy budgets and temperatures on freezing nights, 203
pea and corn, influence of *s*-triazines on enzymes of carbohydrates and nitrogen metabolism, 517
still and flapping, boundary layer resistance and temperature distribution, 437
sunflower, photorespiration and photosynthesis, 712
tobacco
dehydration, water fluxes, and permeability, 575
illumination, O_2, and respiration, 178
tomato, water status, 106
Legumin synthesis in developing *Vicia faba* cotyledons, 419
Lemna
carbohydrate inhibition of flowering, 361
entrainment of CO_2 output through phytochrome, 770
water-sensitive phase of flowering, 760
Lettuce, synergism between ethylene and GA in germinating seeds, 656
Light, red and far red, effect on desaturation of fatty acids in barley leaves, 300
Lignin formation in coleoptile cell walls, 596
Lipids
molecular length of, and hormone action, 559
oat grain, influence of temperature and seed ripening on incorporation of $^{14}CO_2$ into, 433
Lupin, growth-limiting proteins and auxin-induced elongation in hypocotyls, 720

M

Mannitol, suppression of cucumber hypocotyl elongation, 513
Marchantia, control of senescence by phytochrome, 407
4-Methylcatechol, effect of phloroglucinol and resorcinol on clingstone peach polyphenol oxidase-catalyzed oxidation of, 24
Microbodies
development during germination, 566
isolation from plant tissues, 637
Microcalorimeter, measurements in *Scenedesmus*, 779
Microfibrils, pea, ethylene effect, 648
Mitochondria
corn
effects of decenylsuccinic acid, 659
effects of drought on respiration, 413
water stress and membrane characteristics, 229
Mitochondria
in pea cotyledons during germination, 671
mung bean, electron transport from succinate to pyridine nucleotide, 694
skunk cabbage, oxidation-reduction potentials of flavoproteins, 493
Molybdenum, nitrate reduction by *Chlorella*, 294

N

Nickel, translocation in xylem exudate, 273
Nicotinamide adenine dinucleotide, reduced, generation of, for nitrate reduction in leaves, 580
Nitrate
energy source for reduction in green leaves, 580
role of molybdenum in reduction by *Chlorella*, 294
Nitrate reductase
enhancement of activity by benzyladenine in *Agrostemma githago*, 702
in corn seedling, polyribosomes, 617
regulation in barley roots, 219
regulation in *Chlorella vulgaris*, 224
Nucleic acids, metabolism in germinating onion, 73
Nucleotides, changes in chilled cotton plants, 166
Nutrients, uptake by soybean, 457
Nyctinasty, phytochrome-controlled, in *Albizzia julibrissin*, 740

O

Oat
effects of cytokinins on growth and auxin in coleoptiles of derooted seedlings, 97
IAA biosynthesis in coleoptiles, 603
influence of seed ripening and temperature on incorporation of $^{14}CO_2$ into lipids, 433
Oleosomes, isolation from onion, cabbage, and cottonwood tissues, 675
Onion
germinating, nucleic acid metabolism, 73
isolation of spherosomes, 675
Organic acids, effect of freezing on thylakoid membranes in presence of, 156
Osmotic potentials, photosynthesis, 591
Oxygen, photorespiration measured by, 345
Ozone, inhibition of glycolipid biosynthesis in chloroplasts by, 335

P

Pea
Alaska, phytochrome reversion, 46
auxin and hybridizable RNA, 663
black-eyed, coding properties of lysine-accepting transfer RNA, 305
ethylene effect on microfibrils, 648
membrane matrix regulating hormone action, 559
mitochondria development in germinating cotyledons, 671
pyrimidine-metabolizing enzymes in germinating cotyledons, 626
ribosome dissociation into active subunits, 547
s-triazines and leaf metabolism, 517
Peach
clingstone
effect of phloroglucinol and resorcinol on polyphenol oxidase-catalyzed oxidation of 4-methylcatechol, 24
polyphenol oxidase isozymes, 19
dwarfism, 91
Peanut, electron transport in embryos, 340
Peroxidase isozymes, resistance to wheat stem rust disease, 353
Peroxisomes, cucumber cotyledons, 461
Phalaenopsis amabilis, changes in isoenzyme pattern of corolla after pollination, 506
Pharbitis nil, incorporation of ^{14}C-kaurene into gibberellin, 476
Phaseollin, induction by 9-aminoacridine and other DNA intercalating compounds, 197
Phenylalanine ammonia-lyase
corn, 130
induction by 9-aminoacridine and other DNA intercalating compounds, 197
Phloroglucinol, effect on clingstone peach polyphenol oxidase-catalyzed oxidation of 4-methylcatechol, 24
Phosphate uptake in carrot root, 287
3-Phosphoglycerate as Hill oxidant, 163
3-Phosphoglycerate phosphatase
activity associated with starch particles, 488
distribution, physiological considerations, and comparison with P-glycolate phosphatase, 480
Phospholipids in *Uromyces phaseoli* uredospores
identification and localization, 728
metabolism during germination, 735
Photoperiod, ABA content of spinach, 86
Photophosphorylation, photosynthesis in greening bean leaves, 621
Photorespiration
during photosynthesis in sunflower leaves, 712
leaf age, 193
oxygen measurements of, 345
Photosynthesis
CO_2 compensation point, 607
enhancement at high light intensities, 265
formation of anthocyanin in turnip seedlings, 312
in sunflower leaves, photorespiration during, 712
nonstomatal inhibition in sunflower at low leaf water potentials and high light intensities, 532
of spinach chloroplasts, effect of antimycin A, 443
osmotic potentials, 591
photophosphorylation in greening bean leaves, 621
Phytochrome
anthocyanin formation in turnip seedlings, 312

control of fern spore germination, 100
control of senescence in *Marchantia*, 407
entrainment of *Lemna* CO_2 output, 770
"disaggregation" as result of proteolysis, 686
nyctinasty in *Albizzia julibrissin*, 740
reversible effect on ethylene production in rice coleoptiles, 241
reversion in peas, 46
Plastid, barley, development, 526
Pollination, changes in isoenzyme pattern of corolla after, in *Phalaenopsis*, 506
Polyphenol oxidase isozymes of clingstone peach, 19
Polyribosomes
effects of diethyl pyrocarbonate, 801
nitrate reductase in corn seedlings, 617
Potassium
effect of metabolic inhibitors and temperature on uptake and translocation by bean plants, 426
transport of, and stomatal opening, 447
Potato
membrane transformations in aging tubers, 795
regulation of bud rest in tubers, 31
tuber invertase and inhibitor, 366
Protein
bacteria-specific, in crown gall, tumor tissue, 125
enhancement of synthesis in chloroplasts by irradiation of fern gametophytes with blue light, 82
ethylene effects in figs, 806
growth-limiting, auxin-induced elongation in lupin hypocotyls, 720
release from carrot root, 287
uptake and incorporation by tobacco cells, 14
Protochlorophyllide
photoconversion to chlorophyllide in barley seedlings, 60
relationship between photoconvertible and nonphotoconvertible, 383
Pyridazinone inhibitor of chloroplast development, interactions with lipoidal materials, 171
Pyrimidine
gibberellin antagonism, 537
pea cotyledon enzymes metabolizing, 626

Q

Quinolinol sulfate, lack of cytokinin activity, 645

R

Resorcinol, effect on clingstone peach polyphenol oxidase-catalyzed oxidation of 4-methylcatechol, 24
Respiration of corn mitochondria, effects of drought, 413
Rhizobitoxine, inhibition of ethylene production, 1
Ribonuclease isoenzymes, corn, electrophoresis, 64
Ribonucleic acid
ethylene effects in figs, 806
lysine-accepting transfer, from black-eyed peas, coding properties, 305
uptake and incorporation of precursors by tobacco cells, 14
Ribosomes
ethylene effects in figs, 806
Euglena, zinc, 150
pea, dissociation into active subunits, 547
Ribulose 1,5-diphosphate carboxylase in developing cottonwood leaves, 143
Rice, phytochrome action, 241
Ripening
climacteric in tomato fruit, 235
seed, incorporation of $^{14}CO_2$ into oat grain lipids, 433
Root
barley, regulation of nitrate reductase, 219
carrot, salt, protein loss, and uptake capacity, 287
Convolvulus, DNA synthesis in cap cells, 213
corn, transport of ions into xylem, 111, 118
Rose, ethylene production by cell cultures, 394, 399
Rue, ethylene production by cell cultures, 394, 399
Rust disease
detrimental effect on bean water relations, 69
wheat stem, peroxidase isozymes in resistance to, 353

S

Scenedesmus, microcaloric measurements in, 779
Scopoletin, effect on tobacco isoperoxidases, 232
Seed
deteriorating wheat and barley, glucose metabolism of embryos and endosperms, 270
developing barley, amylases in, 331
germinating barley, hydrolytic enzyme production, 137
germinating lettuce, synergism between ethylene and GA, 656
wheatgrass, amylase synthesis at low water potentials, 541
Seedling
barley, protochlorophyll conversion, 60
corn, polyribosomes and nitrate reductase, 617
derooted oat, effects of cytokinins on growth and auxin in coleoptiles, 97
pea, phytochrome reversion, 46
turnip, anthocyanin formation, 312
Senescence, control of in *Marchantia* by phytochrome, 407
Sodium absorption by sugar beet plants, 747
Sorghum
ethylene control of anthocyanin synthesis, 349
water stress and recovery, 613
Soybean
enhanced DNA polymerase activity of chromatin, 43
growth and nutrient uptake, 457
Spherosomes, isolation from onion, cabbage, and cottonseed tissues, 675
Spinach
ABA content in relation to photoperiod and water stress, 86
carbon metabolism in chloroplasts, 379
effect of antimycin A on photosynthesis of chloroplasts, 443
effect of freezing on thylakoid membranes, 156
glycolate formation by reconstituted chloroplast preparation, 325
3-Phosphoglycerate phosphatase, 488
photosynthesis and osmotic potentials, 591
Starch, extracellular hydrolysis in sugarcane cell suspensions, 521
Stem
CO_2 compensation points and photosynthesis, 607
diameter of and plant water status, 683
Sterols, membrane permeability, 653
Steryl ester, membrane permeability, 653
Steryl glycoside, membrane permeability, 653
Stomata, opening of, and potassium transport, 447
Stress
drought, corn mitochondria respiration, 413
osmotic root, ABA and cytokinin contents of leaves, 752
soil water, effect on evaporation, root absorption, and water status of cotton, 783
water, behavior of corn and sorghum, 613
Sugar beet, sodium absorption, 747
Sugarcane, extracellular starch hydrolysis, 521
Sulfate-^{35}S, incorporation into carrageenan in *Chondrus crispus*, 373
Sulfhydryl reagents, inhibition of glycolipid biosynthesis in chloroplasts by, 335
Sunflower
microbody development in cotyledons during germination, 566
nonstomatal inhibition of photosynthesis, 532
photorespiration and photosynthesis, 712

T

Temperature
incorporation of $^{14}CO_2$ into oat grain lipids, 433
of nyctinastic leaves on freezing nights, 203
still and flapping leaves, 437
storage, effect on tomato respiration and ripening, 53
uptake and translocation of ^{45}Ca and ^{42}K by bean plants, 426
Thylakoid membranes, spinach, effect of freezing, 156
Tobacco
effect of scopoletin on isoperoxidases, 232
fate of N^6-(Δ^2-isopentenyl)adenosine, 775
illumination, O_2, and respiration, 178
leaf dehydration and water fluxes, 575
preparation of photosynthetically active cells, 9
promotion of IAA oxidase isoenzymes by IAA, 56
uptake and incorporation of protein and RNA precursors, 14
Tomato
aeration effect on climacteric and ripening, 53
climacteric in ripening fruit, 235
leaf water status, 106
s-Triazines, influence on enzymes of carbohydrates and nitrogen metabolism of pea and corn leaves, 517

Tuber, potato, invertase and inhibitor, 366
Turnip, anthocyanin formation in seedlings, 312

U

Uromyces phaseoli, phospholipids in uredospores
identification and localization, 728
metabolism during germination, 735

V

Vicia faba
legumin synthesis in developing cotyledons, 419
stomatal opening and potassium transport, 447

W

Water balance, ABA, 103
Water status
corn leaf growth, 631
of cotton, effect of soil water stress, 783
stem diameter, 683
Water stress
ABA content of spinach, 86
mitochondrial membranes, 229
Wheat
glucose metabolism of embryos and endosperms from deteriorating seeds, 270
lignin formation in coleoptile cell walls, 596
peroxidase isozymes and rust disease resistance, 353
Wheatgrass, amylase synthesis in seeds at low water potentials, 541
Wilting, carbohydrates in leaves in the dark, 792
Woad, indole glucosinolates, 498

X

Xylem
corn root, lateral transport of ions into, 111, 118
translocation of nickel in exudate, 273

Z

Zinc, *Euglena* ribosomes, 150
